For speeds $>134 \mathrm{~m} \cdot \mathrm{~min}^{-1}(>5.0 \mathrm{mph})$ <br> 2. If truly jogging (not walking), this equations can also be used for speeds of $80-134 \mathrm{~m} \cdot \mathrm{~min}^{-1}(3-5 \mathrm{mph})$ <br> 3. $0.2 \mathrm{ml} \cdot \mathrm{kg}^{-1} \cdot \mathrm{~m}^{-1}=\mathrm{O}_{2}$ cost of running horizontally <br> 4. $0.9 \mathrm{ml} \cdot \mathrm{kg}^{-1} \cdot \mathrm{~m}^{-1}=\mathrm{O}_{2}$ cost of running on incline ( $\%$ grade of treadmill) |

None = due to small mass of arm musculature, no special term for unloaded (zero load) cycling is needed |
