

Solutions to Chapter 5 Assigned Problems:

1. $N=12$; $I/YR = YTM=9\%$; $PMT = 1,000 \times .08 = \80 ; $FV = 1,000$; $PV = \text{Price of the bond} = 928.39$

2. $N=12$; $PV = -850$; $PMT = 1,000 \times .10 = \100 ; $FV=1,000$; $I/YR = YTM = 12.47\%$

3. $N=7$; $I/YR=YTM=8\%$; $PMT = 1,000 \times .09=\$90$, $FV=1,000$; $PV=\text{Price of the Bond} =\$1,052.06$

Current Yield = $90/1,052.06 = 8.55\%$

6. real rate = 3%; Inflation premium = 3%; two year rate = 6.3%; MRP =

Two year rate = real rate + IP +MRP = 6.3%

$3\% + 3\% + \text{MRP} = 6.3\%$

MRP = .3%

7. $N=16$; $I/YR=8.5/2 = 4.25$; $PMT = 50$; $FV = 1,000$

$PV = -1,085.80$

8. $N=10 \times 2$; $PV = -1,100$; $PMT = .08/2 \times 1,000= 40$; $FV = 1,050$; $I/YR = 3.24\%$

$YTC = 3.24\% \times 2 = 6.62\%$

9. a.

1. 5% Bond L: $N=15$; $I/YR= 5$; $PMT = 100$, $FV = 1,000$; $PV = 1,518.98$

Bond S: change inputs to $N=1$, $PV = \$1,047.62$

2. 8% Bond L: $N=15$; $I/YR=8$, $PMT = 100$; $FV=1,000$; $PV = 1,171.19$

Bond S: change inputs $N=1$, $PV= 1,018.52$

3. 12% Bond L: $N=15$, $PMT=100$; $FV=1,000$, $I/YR = 12$; $PV=863.78$

Bond S: change inputs $N=1$; $PV= 982.14$

b. Think about the bond that matures in the next month. Its present value is influenced primarily by the maturity value coming due in a month. Even if interest rates were to double, the holder of this short term bond would get the maturity value plus coupon that is due at the end of the bond --- interest rates do not really matter at this point – maturity value does.

10. a.

1. $N=5$; $PV=-829$; $PMT = 90$; $FV= 1,000$; $I/YR = 13.98\%$

2. Change inputs to $PV = -1,104$; $I/YR = 6.50\%$

b. Yes, at a price of \$829 the yield to maturity of 13.9% is greater than your required rate of return of 12%. If your required rate of return were 12% you would be willing to buy the bond at a price below \$891.86.

11. $N= 7$; $PV = -1,100$; $PMT = 60$; $FV = 1,000$, $I/YR = 14.82\%$

5-12 a. $N= 20$; $PV = -1,100$; $PMT = 60$; $FV = 1,000$; $I/YR = 5.1849\%$

However the annual rate is $5.1849\% \times 2 = 10.3699\%$

b. The current yield is: $\$120/1,100 = 10.91\%$

c. $YTM = \text{Current Yield} + \text{Capital Gains Yield}$

$10.37\% = 10.91\% + \text{Capital Loss Yield}$

$-.54\% = \text{Capital Loss Yield}$

d. $N= 8$; $PV=-1,100$; $PMT = 60$; $FV = 1,060$, $I/YR = 5.0748^*$

So the annual yield to maturity would be $5.0748\% \times 2 = 10.1495\%$

5-13. $PV = 974.42$

$I/YR = YTM = 8.6\%$

5-14. $\text{Current Yield} = \text{Annual Interest} / \text{Current Price on the Bond} = \$110/\$1,020 = 10.78\%$

5-15. Need to calculate the bond's yield to call:

N=10; PV= -1,353.54; PMT = 70; FV =1,050; solve for I/YR = 3.24A%

Therefore, the annual yield to call is: $3.24\% \times 2 = 6.47\%$

5-16

Percentage Change in Price due to

	Price at 8%	Price at 7 %	a 1% Change in Interest Rates
10% Annual Coupon	1,134.20	1,210.71	6.75%
10-Year Zero Coupon Bond	463.19	508.35	9.75%
5-Year Zero Coupon Bond	680.58	712.99	4.76%
30 Year Zero Coupon Bond	99.38	131.37	32.19%
\$100 Perpetuity	1,250	1,428.57	14.29%
